```

1 LABEL/COLUMN DEFINITION

total: This column represents the total number of car crashes in a given state.

speeding: It indicates the number of car crashes in which speeding was a contributing factor.

alcohol: This column represents the number of car crashes in which alcohol or drunk driving was a contributing factor.

not_distracted: It likely represents the number of car crashes where the driver was not distracted while driving.

no_previous: This column may represent the number of car crashes where the driver had no previous car crashes on their record.

ins_premium: It stands for insurance prem be the financial losses incurred by insurance companies due to car crashes in a particular state.

abbrev: This column contains the abbreviations (abbreviated names) of the ium, which is the amount of money paid for car insurance.

ins_losses: This represents the insurance losses, which couldU.S. states.

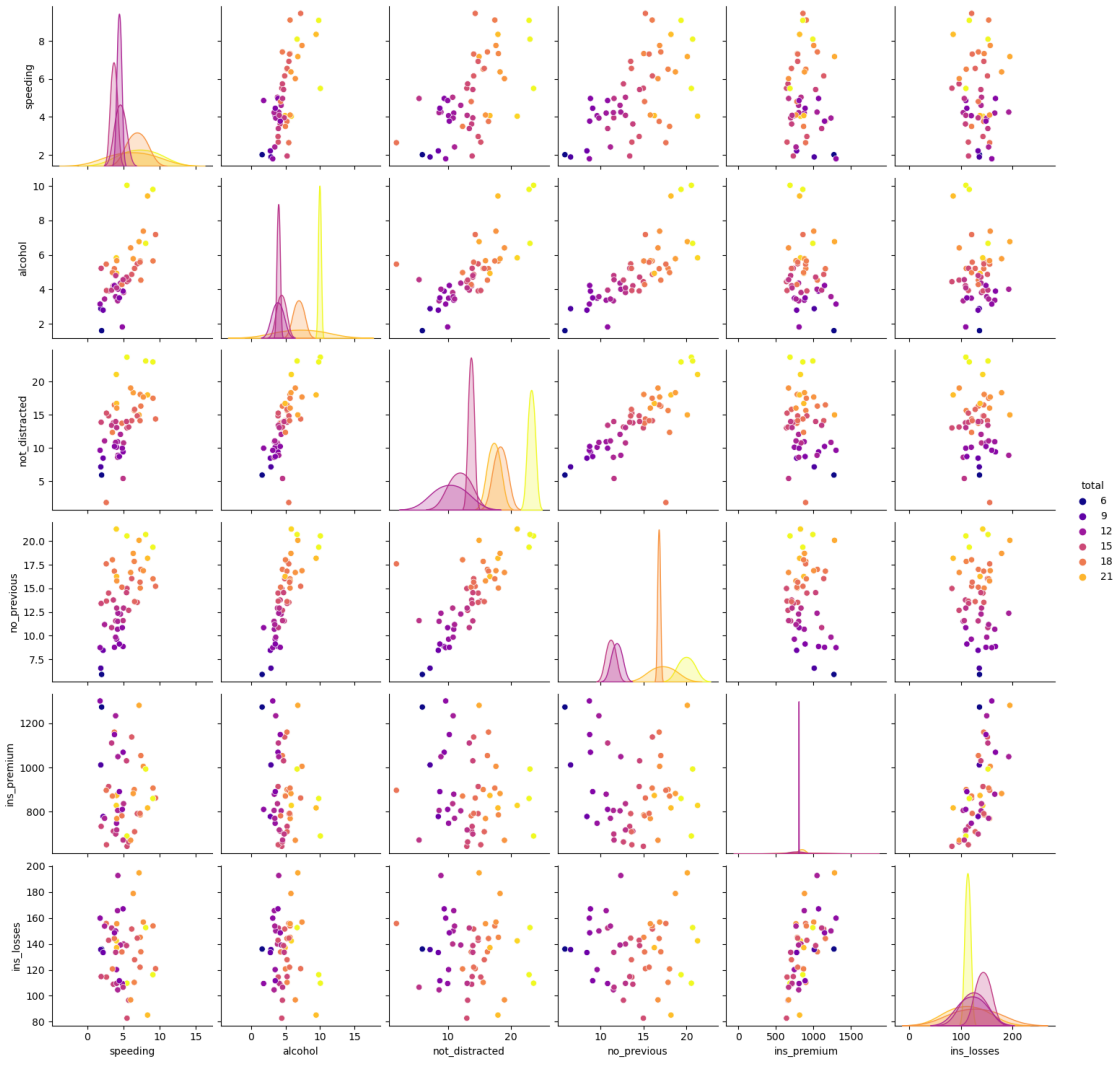
2 SCATTER PLOT

[58]:
```
sns.color_palette("plasma", as_cmap=True)
```

[58]:

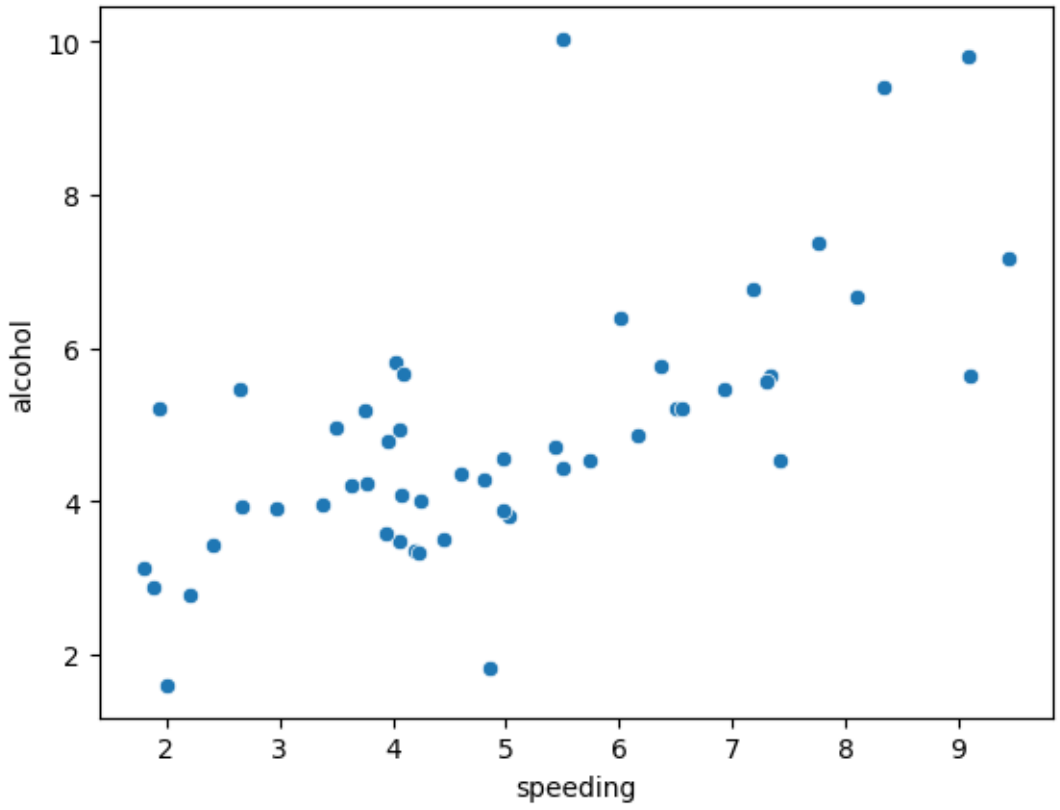
[59]:
```
sns.pairplot(data=dataset,hue="total",kind="scatter",palette="plasma")
```

[59]: <seaborn.axisgrid.PairGrid at 0x2cc1da11010>



[65]:
```
sns.scatterplot(data=dataset,x="speeding",y="alcohol")
```

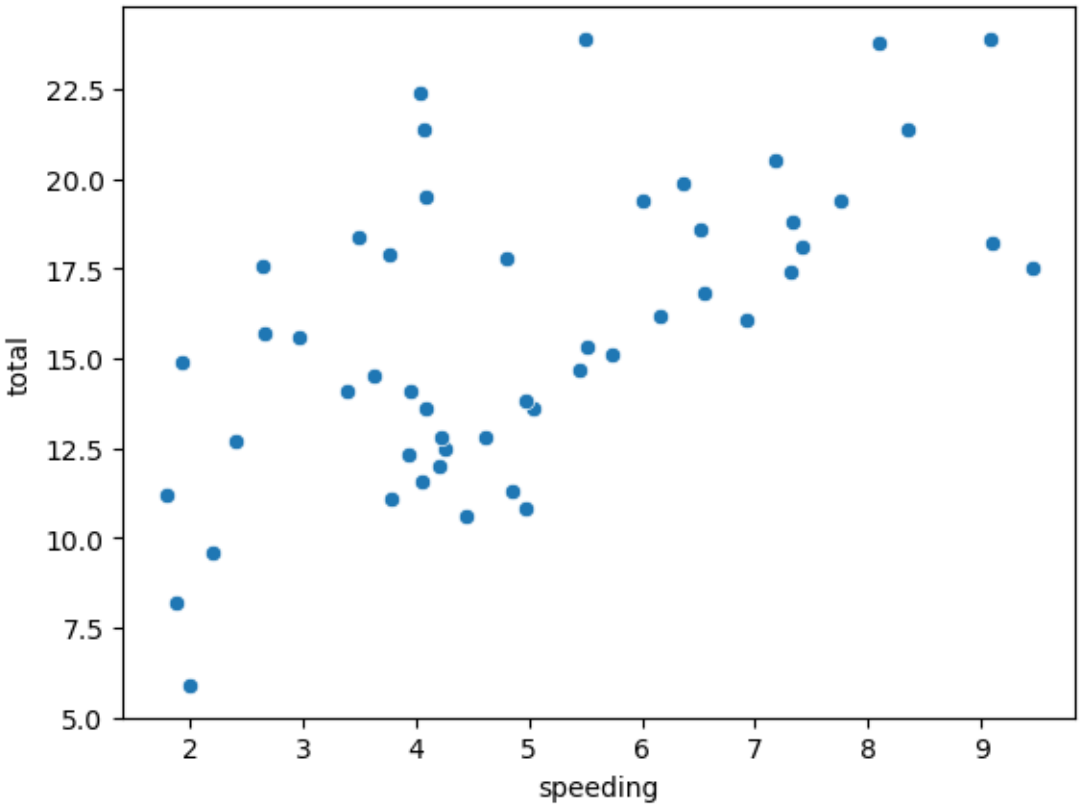
[65]: <Axes: xlabel='speeding', ylabel='alcohol'>



Inference:In the scatter plot, there is a positive correlation between 'alcohol' and 'speeding', implying that states with more alcohol-related crashes also tend to have more speeding-related crashes.

[68]:
```
sns.scatterplot(data=dataset,x="speeding",y="total")
```

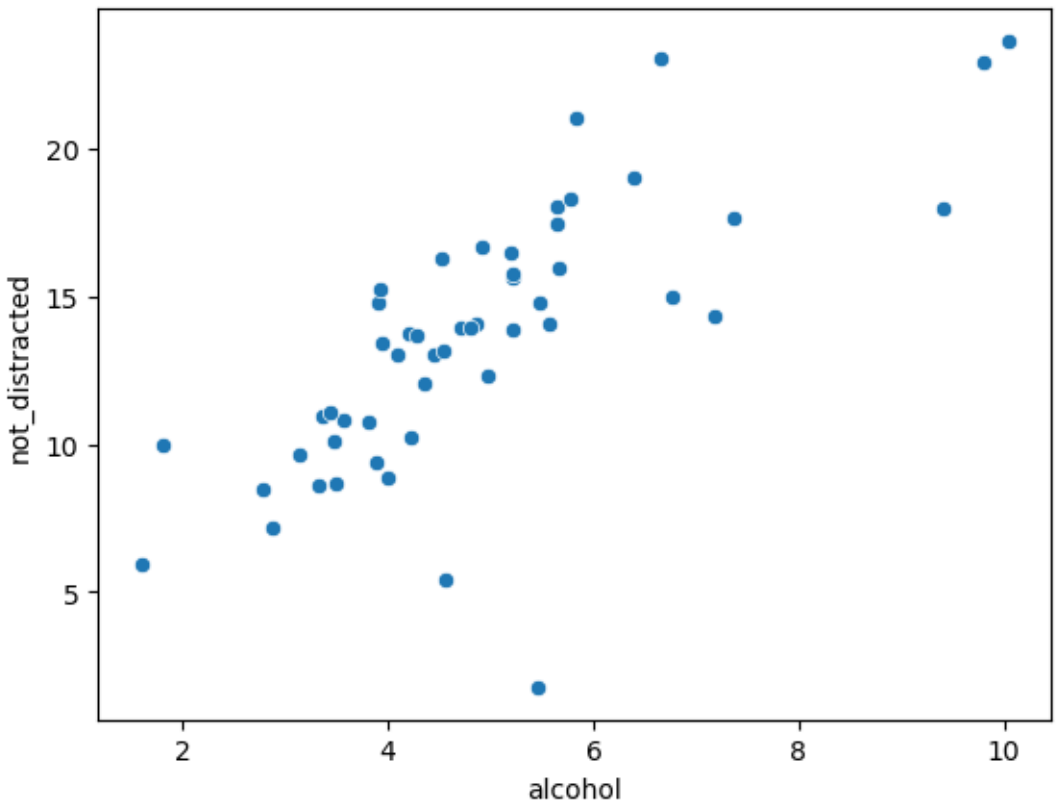
[68]:
```
<Axes: xlabel='speeding', ylabel='total'>
```



Inference:In the scatter plot comparing 'speeding' and 'total' car crashes, there is no strong linear correlation evident, suggesting that the number of speeding-related crashes does not consistently predict the total number of car crashes across states.

[66]:
```
sns.scatterplot(data=dataset,x="alcohol",y="not_distracted")
```

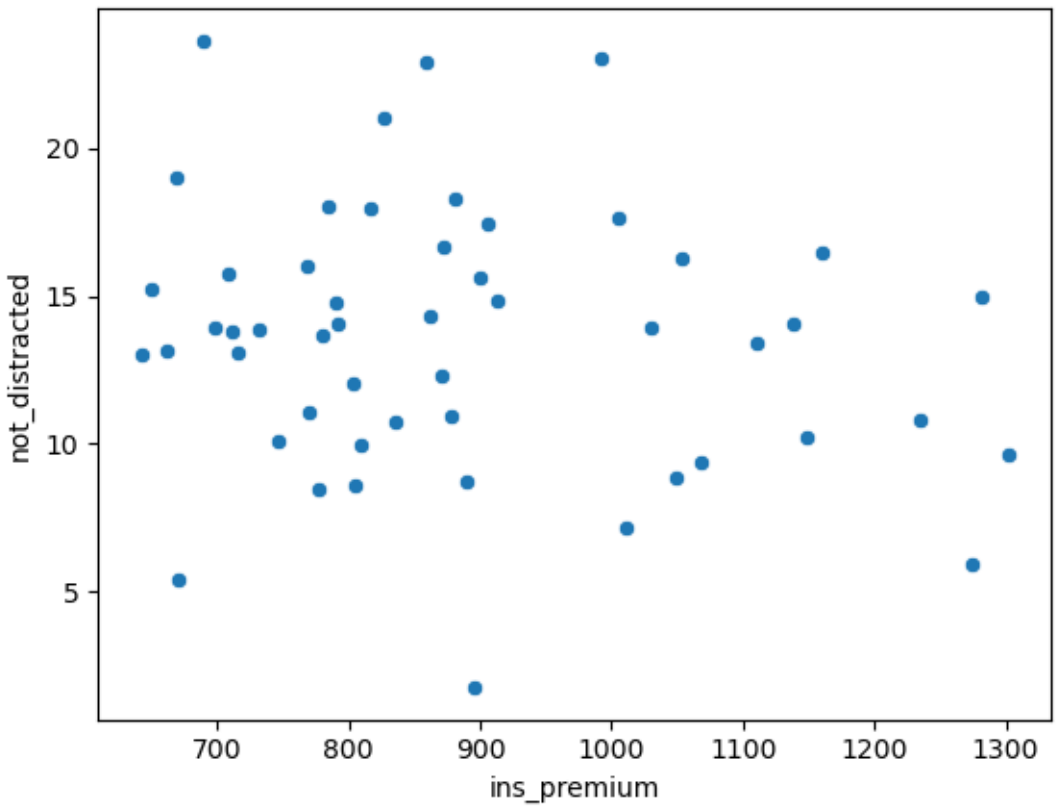
[66]:
```
<Axes: xlabel='alcohol', ylabel='not_distracted'>
```



Inference:In the scatter plot of 'alcohol' and 'not_distracted' car crashes, there appears to be no strong linear relationship, implying that the presence of alcohol-related crashes does not significantly correlate with cases where drivers were not distracted during accidents

[67]:
```
sns.scatterplot(data=dataset,x="ins_premium",y="not_distracted")
```

[67]:
```
<Axes: xlabel='ins_premium', ylabel='not_distracted'>
```

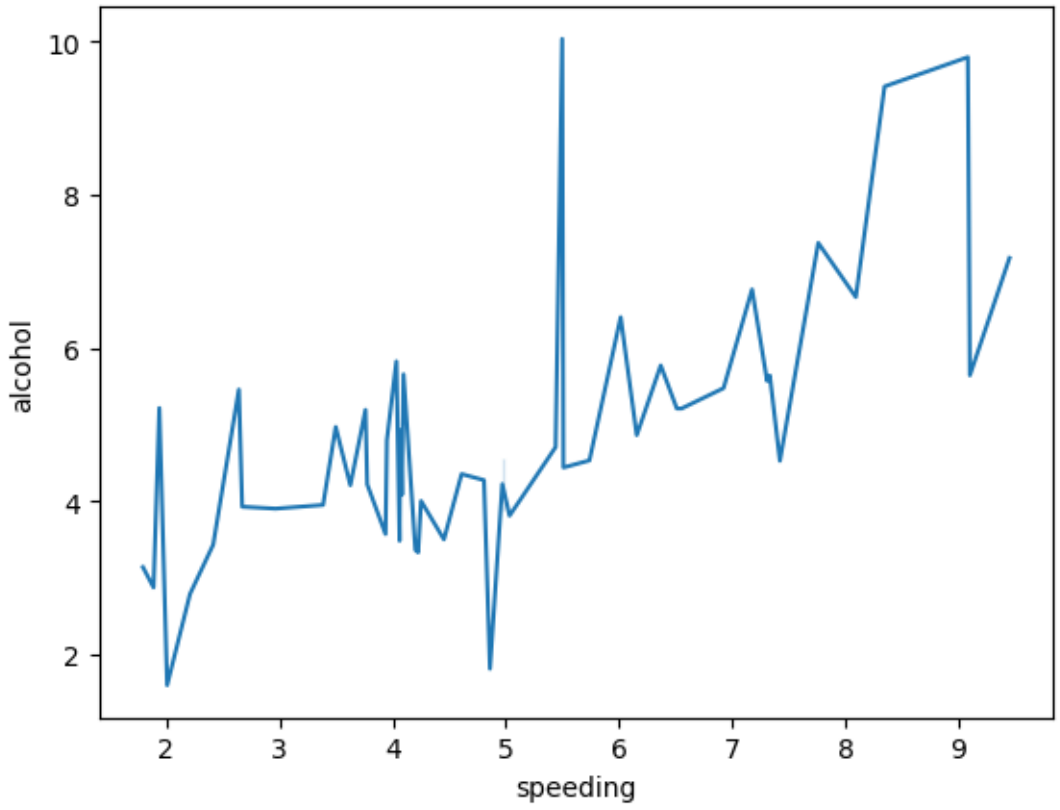


Inference:In the scatter plot of 'ins_premium' and 'not_distracted' car crashes, no clear correlation is evident, suggesting that the cost of insurance premiums does not appear to have a direct relationship with the occurrence of car crashes where drivers were not distracted.

3 LINE PLOTS

[69]:
```
sns.lineplot(data=dataset,x="speeding",y="alcohol")
```

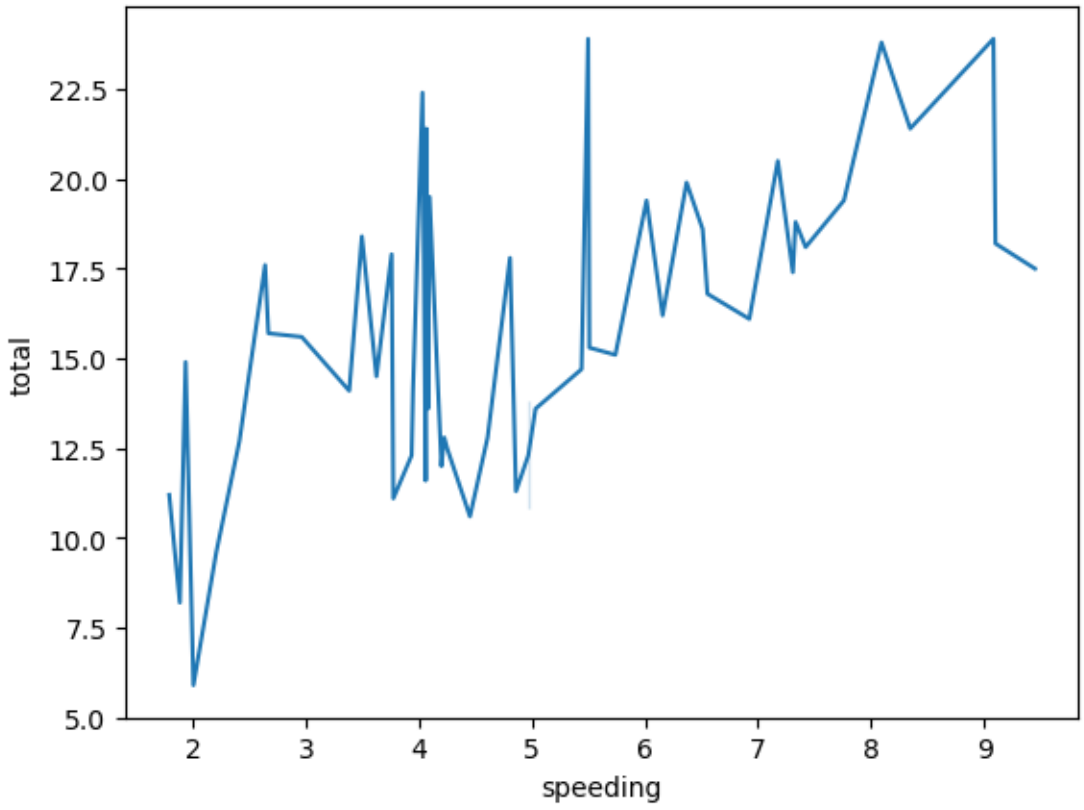
[69]:
```
<Axes: xlabel='speeding', ylabel='alcohol'>
```



Inference:In the line plot comparing 'speeding' and 'alcohol' across different states, it becomes evident that some states exhibit consistently higher counts of both speeding-related and alcohol-related car crashes, indicating that these risky driving behaviors often co-occur in those regions.

[70]:
```
sns.lineplot(data=dataset,x="speeding",y="total")
```

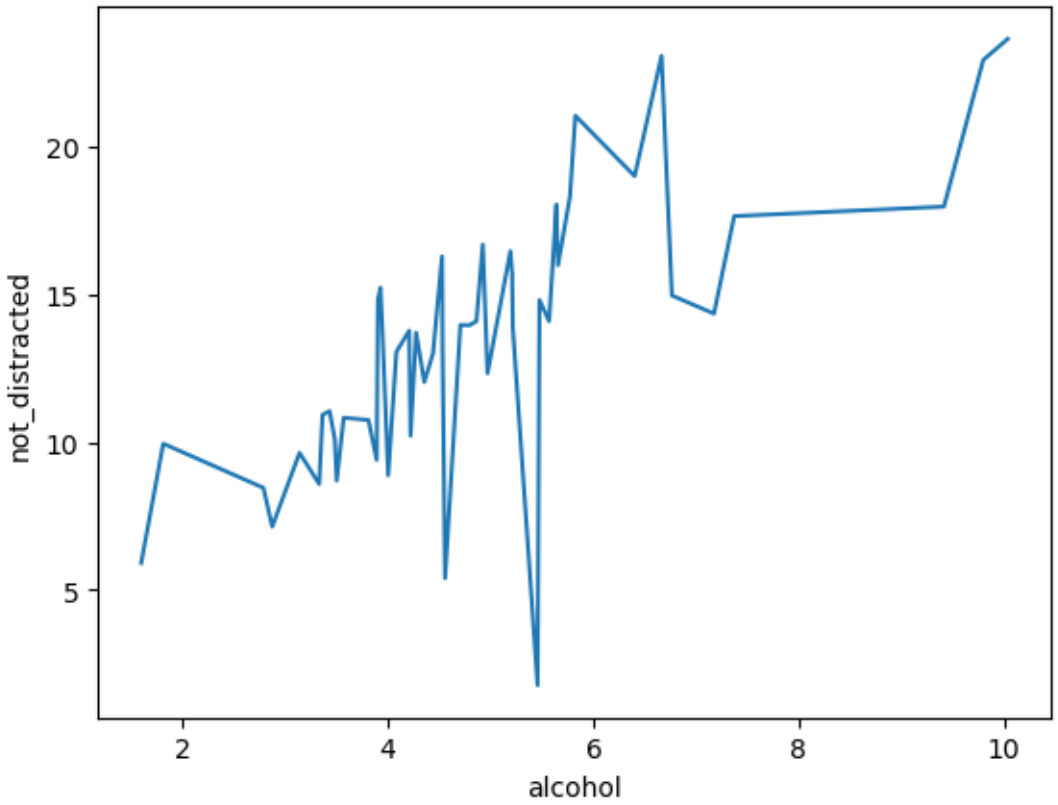
[70]:
```
<Axes: xlabel='speeding', ylabel='total'>
```



Inference:In the line plot depicting changes in 'speeding' and 'alcohol' car crashes across different states,offering insights into the variability and trends in risky driving behaviors in different regions.

[71]:
```
sns.lineplot(data=dataset,x="alcohol",y="not_distracted")
```

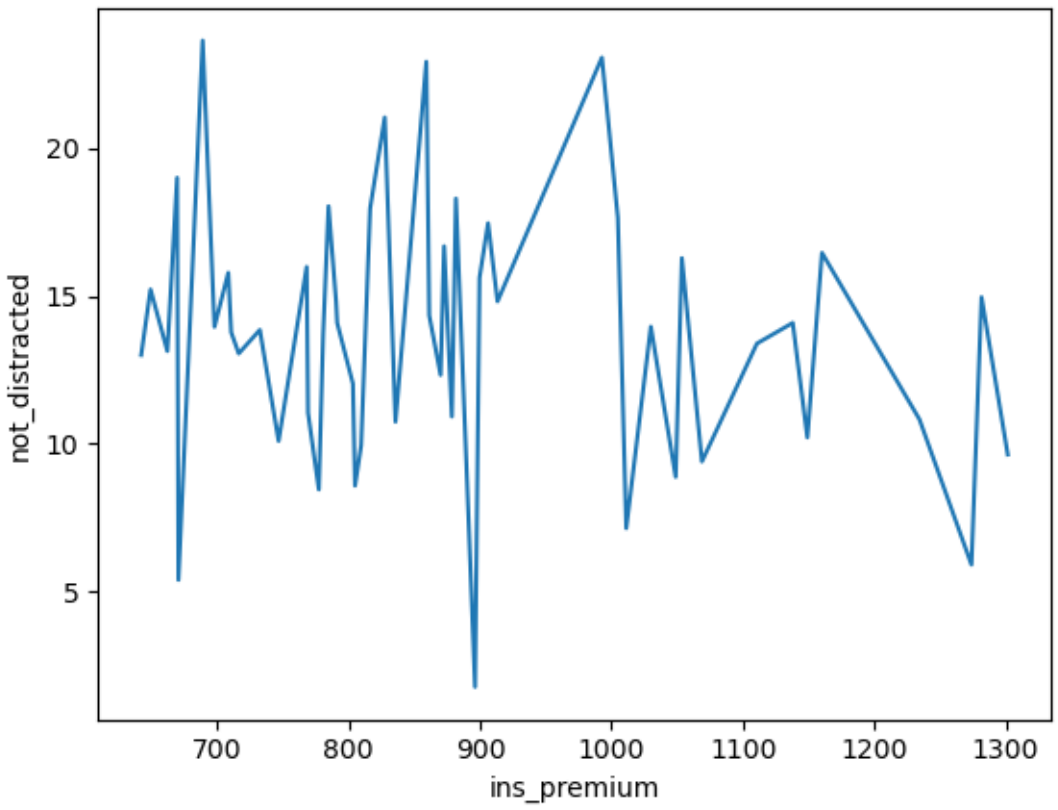
[71]:
```
<Axes: xlabel='alcohol', ylabel='not_distracted'>
```



Inference:In the line plot illustrating variations in 'alcohol' and 'not_distracted' car crashes across different states, providing insights into the complex relationship between alcohol-related accidents and cases where drivers were not distracted

[72]:
```
sns.lineplot(data=dataset,x="ins_premium",y="not_distracted")
```

[72]:
```
<Axes: xlabel='ins_premium', ylabel='not_distracted'>
```

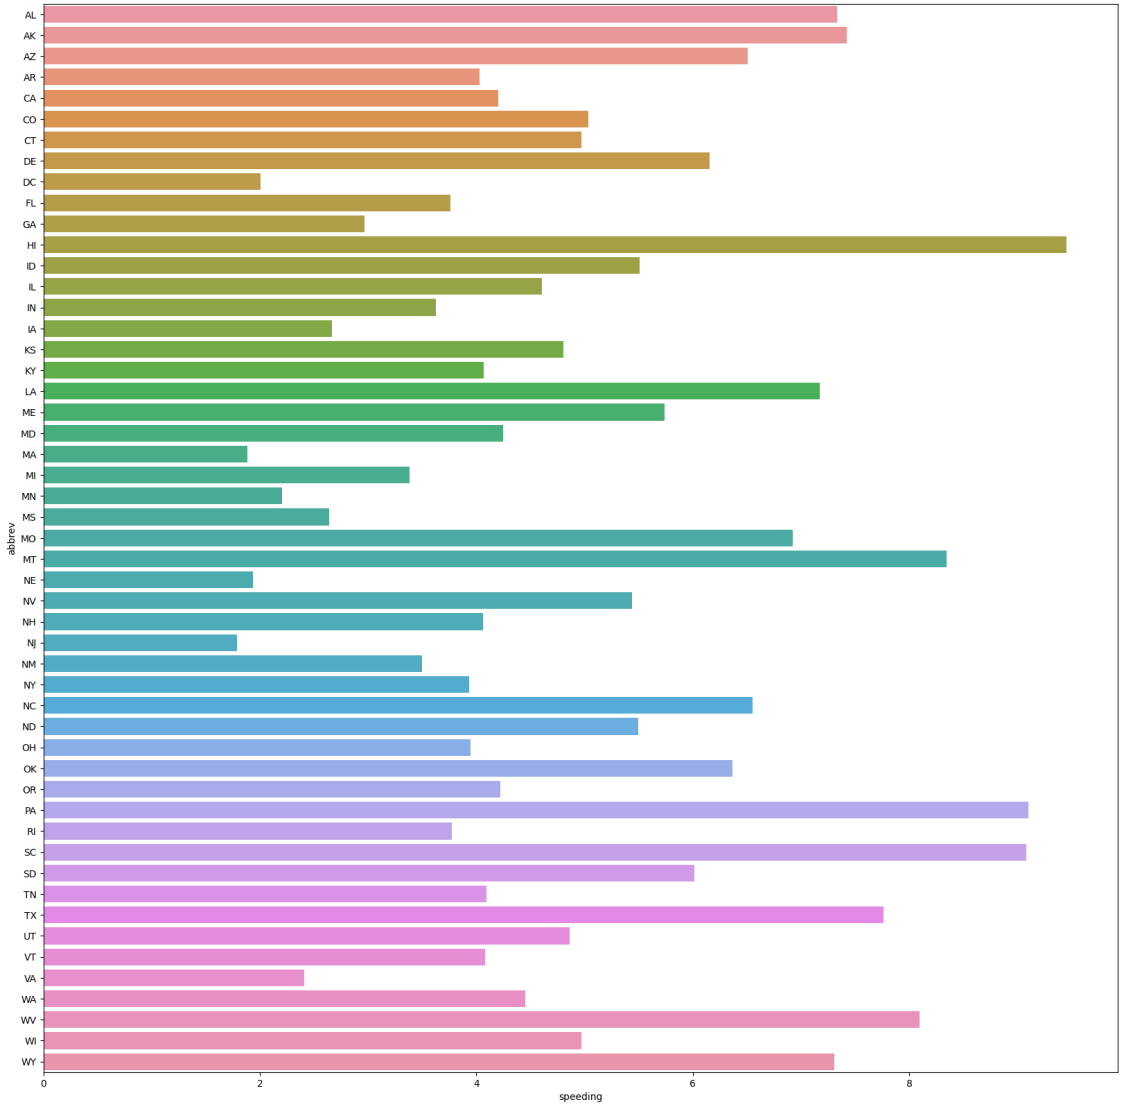


Inference:In the line plot depicting changes in 'ins_premium' and 'not_distracted' car crashes across different states, there seems to be no discernible trend or strong correlation, indicating that the cost of insurance premiums does not appear to be closely related to the occurrence of car crashes where drivers were not distracted

4 BAR PLOTS

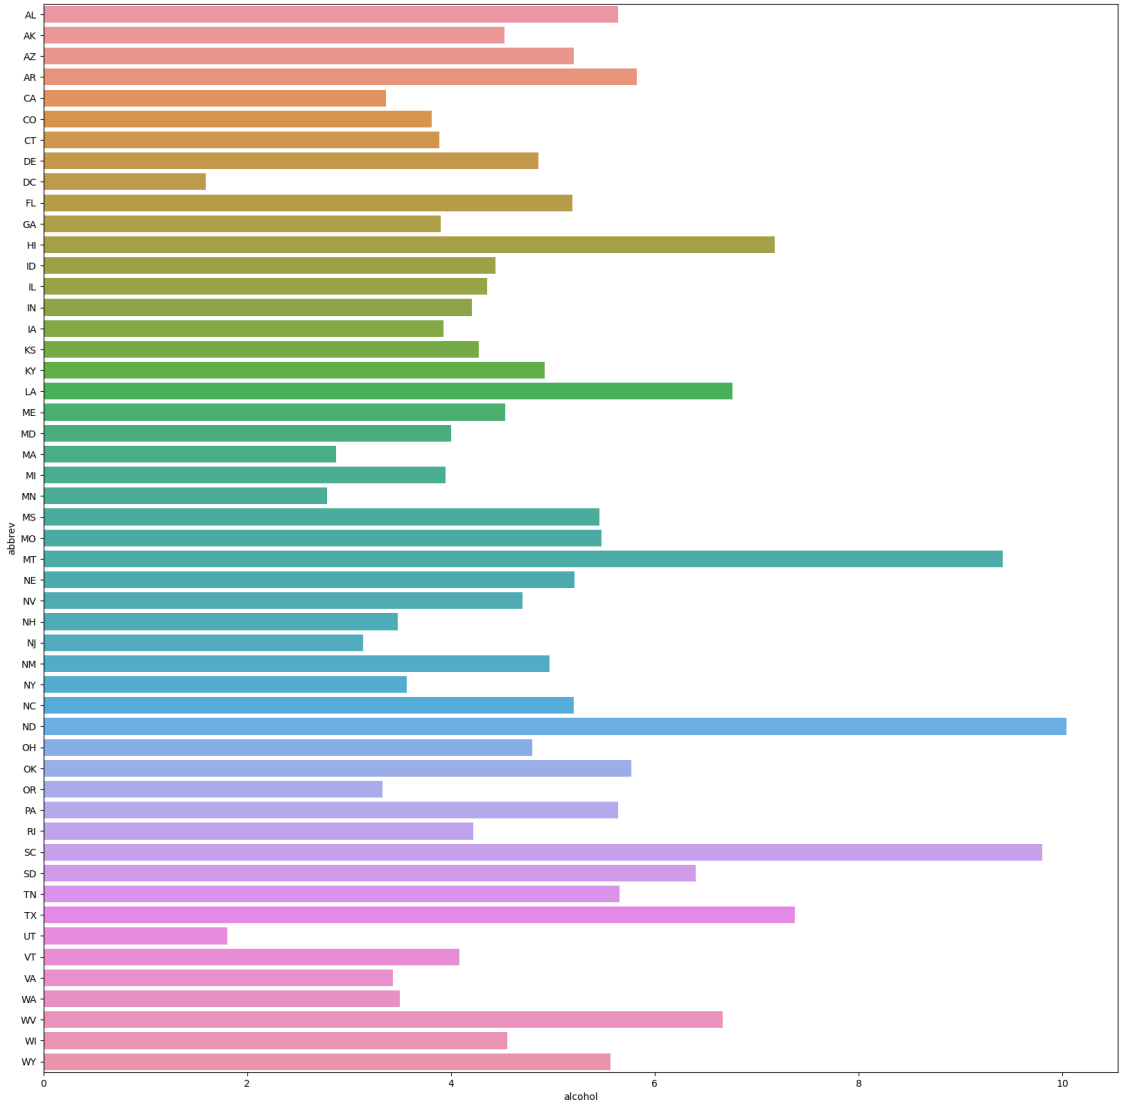
[76]:
```
plt.subplots(figsize=(20,20))
sns.barplot(data=dataset,x="speeding",y="abbrev")
```

[76]:
```
<Axes: xlabel='speeding', ylabel='abbrev'>
```



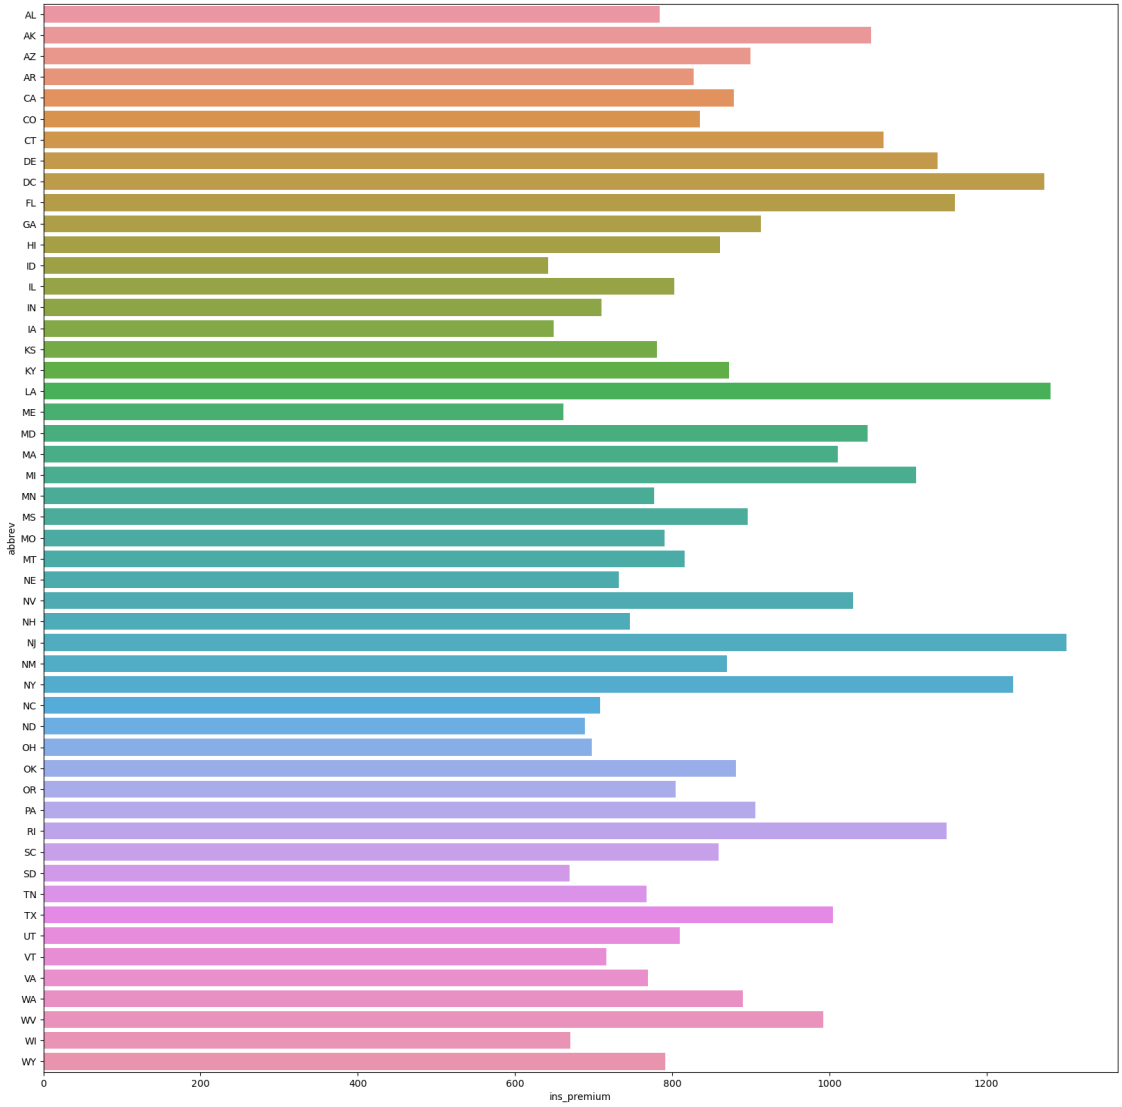
[77]:
```
plt.subplots(figsize=(20,20))
sns.barplot(data=dataset,x="alcohol",y="abbrev")
```

[77]: <Axes: xlabel='alcohol', ylabel='abbrev'>



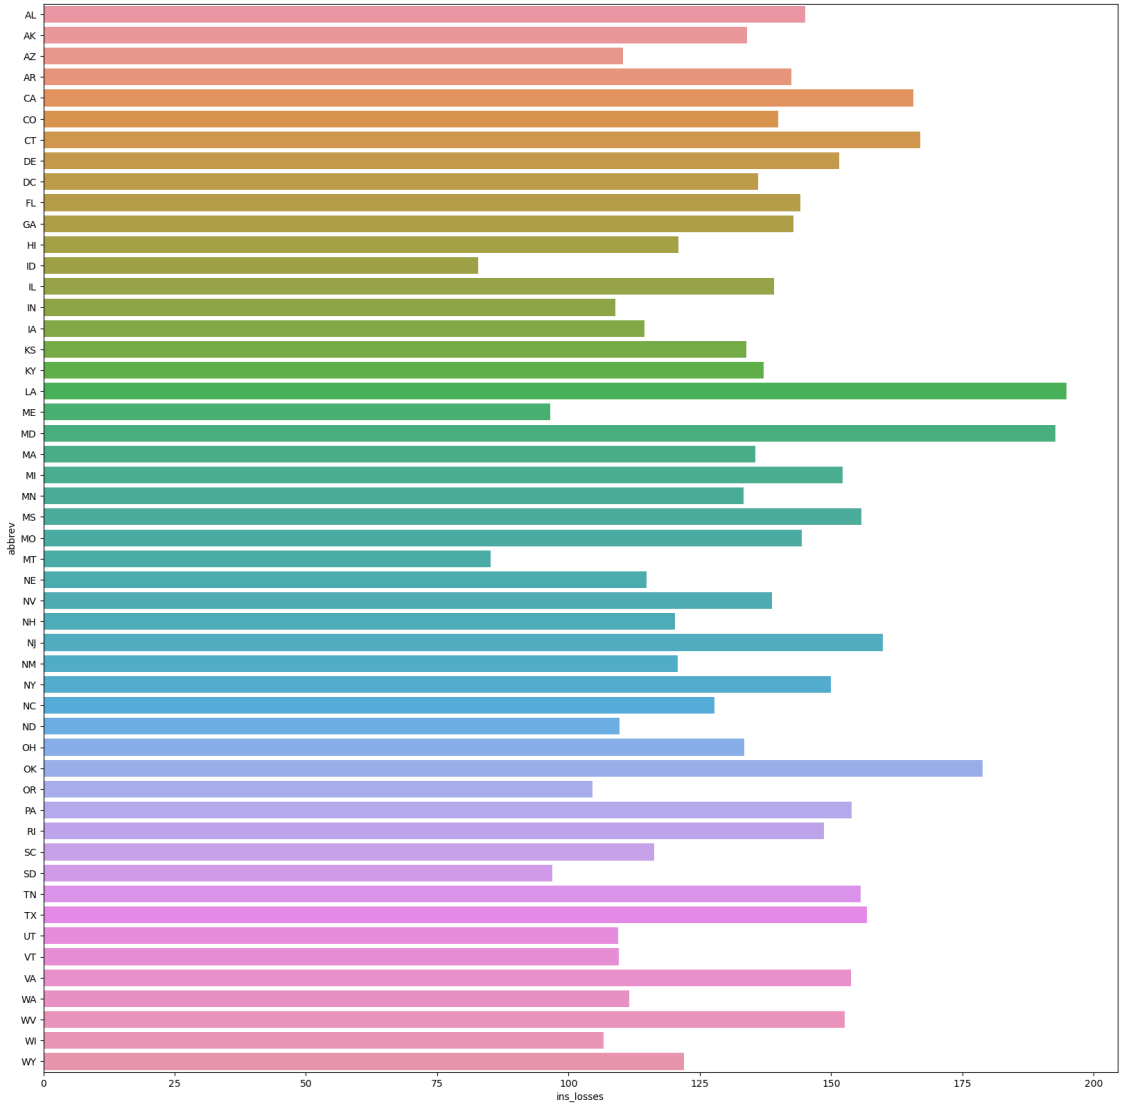
[79]:
```
plt.subplots(figsize=(20,20))
sns.barplot(data=dataset,x="ins_premium",y="abbrev")
```

[79]: <Axes: xlabel='ins_premium', ylabel='abbrev'>



[80]:
```
plt.subplots(figsize=(20,20))
sns.barplot(data=dataset,x="ins_losses",y="abbrev")
```

[80]: <Axes: xlabel='ins_losses', ylabel='abbrev'>



5 HEAT MAP

[83]:
```
corr = dataset.corr()
corr
```

```
C:\Users\WELCOME\AppData\Local\Temp\ipykernel_14272\897440734.py:1:
FutureWarning: The default value of numeric_only in DataFrame.corr is
deprecated. In a future version, it will default to False. Select only valid
columns or specify the value of numeric_only to silence this warning.
  corr = dataset.corr()
